

Can 5 minutes
save you
time, money
and resources?

Full-Depth Reclamation with Cement builds strength and durability into our roads.

Full-Depth Reclamation (FDR) with Cement can help you build longer lasting roads without hauling away your previous investment in road materials. The FDR process provides a solution to underlying pavement problems while offering a better, faster, and cost-effective way to work your road systems out of the ongoing maintenance cycle.

FDR with Cement pulverizes the old asphalt pavement, and recycles it into a new stabilized base ideal for your choice of surface treatment: asphalt, chip seal or concrete. The recycled base is more uniform, stronger and more moisture resistant giving all of the surface treatments a longer, lower-maintenance life.

Buckeye Road - Houston County

Please take five minutes of your time to watch this short video CD on your computer to learn more about the FDR process and how it can save your agency significant time, money and resources. To find out more about the Full-Depth Reclamation with Cement procedure, or if you would like an in-house presentation and assistance on evaluating pavements, please contact me.
